Summary

Jackson develops software that engages technical challenges for optimal trade-offs. His expertise in React and TypeScript come from over three years of experience in which he brought four software products from ideation to production in spaces like agribusiness, security, and robotics. A commitment to performance and sustainability continues to inform his development practice.

Experience

Software Engineer

Amazon Web Services (AWS)

May 2022 - Sep 2022 (5 months)

As a full-stack software development engineer, I define tickets, implement stories, fix bugs, and review solutions. Also, I refine existing tickets, contribute to standup, demo product, and perform retrospective assessment

- Shipped a Test Driver CLI capable of generating fleet resources that was built in TypeScript and Node.js
- Built homography integration that translates geopositional data to cartesian coordinates in a live, 2D facility map using React hooks
- Built UI/UX features, including labels, animations, a fullscreen mode, font sizing, and icon elements using WebGL libraries and JavaScript frameworks, including React and Semantic UI

Software Engineer

ADT

Jan 2022 - Mar 2022 (3 months)

As a backend software engineer, I build an alarm signal processor on Google Cloud Platform (GCP) to use services including Storage, Pub/Sub, API Gateway, and Functions.

- Built a video clip processor that piped byte streams and blob storage
- Wrote unit tests in Mocha for serverless functions, pub/sub handlers, and storage triggers
- Configured API endpoints that routed HTTPS requests from partner services to internal messaging hubs

Software Engineer

CyncHealth

Aug 2021 - Sep 2021 (2 months)

As a full-stack software engineer, I build the visualization component of a healthcare metrics dashboard.

- Built a React web client that renders hospitalization data in charts, graphs, and diagrams, using JavaScript, React Charts, and d3.js

- Mentored junior developers in application architecture, and coding best practices

Developer
Syngenta
Jun 2021 - Aug 2021 (3 months)
As a font-end web developer, I build the authentication component of a React app using flux-based JavaScript state management libraries to deliver seamless and performant registration, and login experiences.

- Translated Figma design specifications to JavaScript implementations using modern libraries like React, Redux, and Tailwind CSS
- Wrote unit and integration tests for 80% coverage using Jest, React Testing Library, and Cypress
- Wrote and refined user stories, spikes, bugs, and test criteria

Software Engineer-in-Residence
Operation Spark
Sep 2020 - May 2021 (9 months)
· Migrated 50,000 collections-based records using TypeScript to a relational SQL database that reduced input cost by 75%.
· Documented ETL scripts that instructed non-technical staff in best practices
· Built GraphQL mutations that automated coursework generation
· Built AWS CLI tools that automatically synced production and development environments, using s3 and ec2
· Built Slack integrations for Help Desk that improved data collection rates and increased student pass rate by 25%

Software Developer
Blast
Aug 2019 - Sep 2020 (1 year 2 months)
- Developed Front-end React components for web and mobile
- Wrote unit and integration tests
- Refactored legacy code for 40% reduced codebase footprint

Regular Classroom Teacher
San Francisco Unified School District
Dec 2016 - Aug 2019 (2 years 9 months)
The Lowell HS English classroom teacher instructs students in writing, reading comprehension, literary history, and literary theory. My role included oversight of both the Journalism society, and student-led literary organization. Primary responsibilities involve the assessment of written and performed student work.

Office Manager
PonoMusic
Jul 2014 - Dec 2016 (2 years 6 months)

Office manager for 10-15 employee startup, in charge of facilities, shipping, warehousing for 10,000+ product store. Interdepartmental first point of contact, and reception at the office front desk. In support of QA, filled tickets online, and reported to Engineering, Executive, and Marketing. Facilitated productive company meetings, hosted promotional events of 25-50 guests, and organized appearance at industry events such as CAS, Outside Lands, CES, and Dreamforce. Company founded by rock 'n roll icon Neil Young.

Education

Fordham University

Bachelor of Arts (B.A.), English Language and Literature/Letters

2008 - 2012

Hack Reactor

Software Enineering

2019 - 2019

A 12-week, 667hr software engineering bootcamp with a focus on programming fundamentals, and professional autonomy.

My area of study included Algorithms and Data Structures, Full-stack development, JavaScript, HTML/CSS, and Node.js

Skills

Pixi.js • JSON • Google Cloud Platform (GCP) • API Development • Serverless Computing • Image Processing • D3.js • Redux Thunk • JSON Web Token (JWT) • Web Development
